

# Introducing SIP Connectivity

SIP connectivity, which is a method of making calls over the internet, provides an easy bridge between you and LanguageLine's thousands of video and audio interpreters using your SIP-enabled telehealth or virtual meeting platform of choice.

## Key features include:

- Quick and easy implementation. All you need is a LanguageLine activation code and a SIP address book.
- Access interpreters within the platform at any point during a meeting.
- Automatic rollover to audio if video is not available (available 24/7).
- Connect in seconds to LanguageLine's network of over 20,000 interpreters.
- Available in 240+ audio languages and 40+ video languages, including American Sign Language (ASL).

## Ask your platform administrator these questions:

- 1 Is SIP functionality enabled? If not, can it be enabled?
- 2 Does our platform support adding a participant through a SIP dial-out?
- 3 Can you place a successful SIP test call to confirm SIP functionality?  
**Audio and video platform:**  
[test-siptestlls@sip.languageline.com](mailto:test-siptestlls@sip.languageline.com)  
**Audio only platform:**  
[test-audio-siptestlls@sip.languageline.com](mailto:test-audio-siptestlls@sip.languageline.com)
- 4 Can you import SIP addresses to our platform address book?
